Screen Printing

1 to 8 color designs

Custom screen printing uses a fine screen mesh to make a stencil. Ink is spread over the screen, passing through the mesh to make contact with the underlying fabric.

Only one color can be used per screen, so a multi-colored logo or image needs multiple screens to create a finished product. Custom T-shirt screen printing produces images that maintain their color for a long time, as the ink has permeated the fabric.

Screen printing is best suited for simple designs that use only a few colors. The set-up process is more time-consuming so this process is better when making large numbers of shirts.

Use custom screen printing if:

- Your logo is simple and includes bright colors.
- You want to maintain the soft feel of a Tri-blend shirt or similar garment.
- You want the finished product to withstand machine washing well.
- You have a large order to fill.
- All shirts will have the same logo, lettering, and other decorations

Heat Press

1 color up to full color designs

A custom heat transfer works through a combination of heat and pressure.

Custom heat transfer allows you to print multiple colors at once. The ability to switch out different designs and letters makes it easier to customize individual shirts. The process allows you to use complex designs, including photo replication, that would be more difficult and less photo-realistic with custom screen printing. Heat transfers provide better resolution than screen prints, but are less cost-efficient for larger quantities.

Use custom heat transfers if:

- You're making a small order, or need to make frequent small orders.
- You need to transfer an intricate image with three or more colors.
- You need to individualize each transfer, such as different numbers and names for team uniforms?

Price Guide

(Aug 23- July 24)

PRICING FOR AN ORDER DEPENDS ON 4 KEY FACTORS.

- Quantity of shirts – the more you order, the less expensive per shirt
- Brand, style, and color of shirts
- Amount of colors in artwork – If you are on a budget, we would suggest doing 1 color printing, or as few colors as possible to save money.
- Amount of print placements (Front, back, sleeve, tag...) – Adding more placements does increase the price.
